HTML LINK TAGS

Hyperlinks:

Hyper links are underlined words (or) locations in the web page that lead to other documents.

There are two types of hyper links:

    1) Page Jump Hyper Links

    2) Book Mark Hyper Links

1) Page Jump Hyper Links:

These are divided into two categories:

    i) Internal Hyper Links

    ii) External Hyper Links

Internal Hyper Links:

The link between two different web pages with in the same website is called as internal hyper link.

External Hyper Links:

The link between two different web pages in two different websites is called as external hyper link.

Book Mark Hyper Links:

The link between two different locations in the same web page is called as book mark hyper link.

Link Tags:

<a> ..... => It is used to define hyper link. It is called as an anchor tag.

Attributes of <a> tag:

i) href="....." => It is used to specify the hyper link reference.

ii) name="....." => It is used to define hyper link name. It is required to

create a book mark hyper link.

iii) title="....." => It is used to define tool tip text.

iv) tabindex="......" => It is used to define tab index to hyper link.

v) target="_blank/_self" => _blank attribute value required to open link

reference in another tab in a browser.

=> _self attribute value required to open link

reference in the same tab in a browser.

Attribute value of href="mailto:venkatesh.mansani@yahoo.com" is used to open to send mail to the specified mail address.

Attributes of <body> tag:

i) link="...." => It is used to specify the link color.

ii) alink="...." => It is used to specify the active link color.

iii) vlink="...." => It is used to specify the visted link color.

Example:

```
<html>

<body>

<h1>

<a href="order.html" target="_blank">Ordered List</a><br>

<a href="unorder.html" target="_self">Unordered List</a><br>

<a href="Microsoft-edge:http://www.google.com">Google</a><br>

<a href="mailto:venkatesh.mansani@yahoo.com">Mail</a><br>

<a href="#cjava">Core Java</a>

<br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><b
r><br><br><br><br><br><br><br><br><br><br><br><br><br><br>

<a name="cjava">Core Java Content</a>

</h1>

</body>

</html>
```

In the above example microsoft-edge specifies that the link to be opened in Microsoft Edge Browser.

Book Mark Hyperlinks Example:

```
<!-- Book Mark Hyperlinks Demonstration -->

<html>

<body>

<a href="#cjava">Core Java</a>
```

```
<a href="#ajava">Advanced Java</a>
```

```
<br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br>
```

```
<a name="cjava">Core Java Contents</a>
```

```
<br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br>
```

```
<a name="ajava">Advanced Java Contents</a>
```

```
<br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br>
```

```
</body>
```

```
</html>
```
